

5.1P: In Person Check-in 2 – Answer Sheet

1. What was the most challenging aspect of the drawing tasks? Why?

For me it was the `IsAt` function. Before I knew the method `SplashKit.PointInCircle/rectangle/line/...`, I struggle like half an hour on this because when we draw the shape, it is not in the center of our cursor so by that you need another condition where the point the current cursor is on need to be different from where the original point u clicked to draw

2. Review your answer to question 3 from check-in 1. Did you use any of the strategies you identified? How did they go?

I did not sadly. I watch a few videos but im having trouble understanding Indian accent. For the last 2-3 week, I mainly asked my friends who already got good score in OOP class.

3. What are some strategies for success you can start or continue using for the remainder of the semester?

I should start practicing C# more cause it is taking A LOT of time to do the lab (dr.Khoa speculated the students taking like 20mins to finish the lab while I need like an hour or 2 to complete just 1 lab especially the Iteration lab).
